

USER GUIDE

Everything your business needs to run daily sales, on one phone.

A short, practical, step-by-step guide — from signing up to monitoring performance — for every JMS Sales App user.

Built by **James** — **SyncScore Ltd** · Technology Firm

What's inside

Short sections, each straight to the point — read start to finish, or jump to what you need.

- A** Introduction — what the app does, and its strengths
- B** Getting Started — Sign Up, Business Setup, Login, Dashboard
- C** Setting Up the Business
- D** Inviting Employees / Users
- E** Recording Sales
- F** Products
- G** Users & Permissions
- H** Reports & Analytics
- I** Billing & Subscription (incl. optional Inventory add-on)
- J** Other Features
- K** Inventory & Stock — Full Guide (Optional Module)

Your complete journey: Sign up → Complete business setup → Add products → Invite employees → Employees record daily sales → Monitor sales → Access reports & analytics → Manage the account confidently.

What JMS Sales App does

A mobile-first sales capture and business-performance platform for small and growing businesses.

JMS Sales App gives every business — a shop, a kiosk, a restaurant, a service counter — one simple daily workflow: **record every sale as it happens, keep a clean history of it, and see how the business is really performing.**

Who it's for

Any business owner or manager who wants their team logging sales on a phone, in seconds — no spreadsheets, no paper — and who wants trustworthy reports at the end of the day, week, or month.

Key strengths

- **Built for phones.** Every screen is designed mobile-first, fast to tap through at the counter.
- **One business, many people, one accurate picture.** Invite your team, control exactly what each person can see and do, and every sale rolls up into one shared, trustworthy view of the business.
- **Nothing recorded twice.** Sales are protected against accidental double-submission, and every correction, void, or reversal stays visible — never silently edited away.
- **Real reporting, not guesswork.** Daily summaries, product performance, and staff performance are generated automatically from what was actually sold.
- **Private per business.** Every business's data is fully isolated from every other business.

From the moment a sale is made to the moment the owner checks performance, JMS Sales App connects the two: **capture → history → reports → decisions.**

Sign Up → Business Setup → Login → Dashboard

The whole path from nothing to a working account takes a few minutes.

Step 1 — Sign Up

- 1 Open the app and tap **Sign up**.
- 2 Enter your first name, last name, business name, email, phone, country, and a password.
- 3 Tap **Create account**.

Step 2 — Business Setup (Onboarding)

The first time you log in, a short wizard walks you through **business details** (type, website, currency, timezone) and **location & hours** (your primary location and opening hours for each day). This happens once — every login after that goes straight to your dashboard.

Steps 3 & 4 — Login and Dashboard

Return any time at the Login page. You land on **Capture Sales**, with a bottom navigation bar giving access to Sales, History, Analytics, Reports, and More (everything else).

The first time you reach your dashboard, a short guided tour points out where to configure your business, add branches and products, record your first sale, and find Reports/Analytics — Next, Back, or Skip to move through it. It only shows once; replay it anytime from More → Restart Product Tour or More → Help & Support.

If your account is assigned to more than one branch, you'll see a **Select a Branch** screen after logging in — choose which branch you're working from for this session. Everything you see and record is scoped to that branch until you log out; to switch branches, log out and log back in and pick the other one. Accounts assigned to only one branch go straight to the dashboard as usual.

The image displays three sequential mobile app screens for the JMS (Jamaica Mobile Sales) application.

Screen 1: Login
 The screen features the JMS logo at the top. Below it, the text "Welcome back" is followed by "Log in to record today's sales." There are input fields for "Email" and "Password". A "Forgot password?" link is next to the password field. A black "Log in" button is at the bottom. Below the button, it says "Don't have an account? [Sign up](#)".

Screen 2: Create your business account
 The screen shows the JMS logo and the title "Create your business account" with the subtitle "Start capturing sales in minutes." There are input fields for "First name", "Last name", "Business name", "Email", "Phone", and "Country". There are also "Password" and "Confirm password" fields. A black "Create account" button is at the bottom. Below the button, it says "Already have an account? [Log in](#)".

Screen 3: Business details
 The screen shows the JMS logo and the title "Business details" under "STEP 1 OF 7". There are input fields for "Business type" (with a hint "e.g. Restaurant, Retail shop"), "Website (optional)" (with a hint "https://"), and "Business anniversary (optional)" (with a hint "dd/mm/yyyy" and a calendar icon). There are also dropdown menus for "Currency" (set to "KES") and "Time zone" (set to "Africa/Nairobi"). A black "Continue" button is at the bottom.

Business setup — Step 1

Before your team starts selling

A few minutes of setup makes everything else run smoothly.

- **Business profile** — go to **More** → **Settings** any time to review business details, currency, and configuration — not just during onboarding.
- **Business settings** — also under Settings: toggle **product ranking** (Gold/Silver/Bronze badges), **daily sales volume** visibility, **product price** visibility on the Sales screen, the **sale number format**, and automatic **business-anniversary wishes** for your team.
- **Products** — go to **More** → **Products** to build your catalog (see section F).
- **Branches** — if your business operates from more than one location, go to **More** → **Settings** → **Branches** to add branches beyond the one created during onboarding, and to edit or deactivate existing ones. Every sale, business day, and report is kept separate per branch.
- **Sales-related security** — under **More** → **Security**, optionally restrict login to business hours and/or your business's physical location.

Bring your team onto the platform

A Tenant Administrator can invite anyone who needs to capture sales or manage the business.

- 1 Go to **More** → **Users**.
- 2 Tap **Invite user**.
- 3 Enter their **full name**, **email**, and choose a **role**.
- 4 If your business has more than one branch, choose whether they work across **all branches** or only **specific branches** — this decides what they see after logging in. Single-branch businesses never see this step.
- 5 Tap **Invite** — they receive an email invitation.
- 6 Once they accept and set a password, they're added — active immediately, no further action needed.

A person's branch assignment can be changed later from the Users page at any time.

What invited users can access

Access is controlled entirely by role: **Sales User** (record sales, see their own history/ analytics), **Supervisor** (broader visibility across the business), or **Tenant Administrator** (full access to everything). Roles can be reviewed and customized under **More** → **Roles**.

On the Users page, an invited person shows as **Invited** until they accept, then **Active**. Once active, **that employee can log in on their own device and immediately start recording their own daily sales** — this is the whole point of inviting them.

The screen your team uses the most

Fast enough to use with a customer standing at the counter.

- 1 Tap **Sales** in the bottom navigation — your product catalog appears as a scrollable list.
- 2 **Search** for a product by name using the search bar if the list is long.
- 3 Tap a product to open **Record Sale**.
- 4 Product not in your catalog? Tap **Others** at the bottom of the list — a required "Enter Product Name" field appears. The sale still records correctly under that typed name.
- 5 Enter the **amount sold** (and quantity, if enabled for your business).
- 6 Tap **Record Sale** — you'll see an instant confirmation.
- 7 Tap **History** any time to review what's already been recorded.

Every sale is protected from accidental duplicate submissions — a double-tap or a network retry never creates two records.

Managing your catalog

Go to **More** → **Products**.

- **Creating a product** — enter a name, price, and optional description, then save.
- **Editing** — tap a product's edit icon to change name, price, or description.
- **Product images** — open a product to upload, replace, or remove its photo.
- **Activating / deactivating** — hide a product from the Sales screen without deleting it or losing its history.
- **Deleting** — only possible if the product has never been sold; otherwise, deactivate it.
- **Searching** — use the search bar at the top to instantly filter a long catalog.
- **Bulk upload** — download the products template, fill in Product Name, Expected Price, and Image URL, then upload it in one go.
- **On the Sales screen** — active products appear in this same order, with an automatic **Others** entry always last.

Sales History Analytics Reports More

Who can do what

Go to **More** → **Users** to manage your team, and **More** → **Roles** to manage what each role can do.

- **Viewing users** — see everyone's name, email, status, and role in one list.
- **Inviting new users** — see section D.
- **User roles** — assign or change a user's role directly from the Users list.
- **Activating / deactivating** — disable access instantly (e.g. when someone leaves) without deleting their sales history, or re-enable later.
- **Editing a name** — a Tenant Administrator can correct a teammate's display name after they've accepted their invite.
- **Access control & data separation** — every business on JMS Sales App is fully isolated; your team only ever sees your business's data, regardless of plan or role.

Understand how the business is doing

Two complementary views: real-time Analytics, and automatically generated Reports.

Analytics

Bottom navigation → **Analytics**: total sales, transaction count, average/highest/lowest sale, and **Top Products** ranked by revenue. Gold/Silver/Bronze badges on the Sales screen highlight your best sellers over the trailing 30 days. Filter by today, a custom range, or (with permission) any past date.

Reports

Bottom navigation → **Reports**: an automatic **daily summary** — gross sales, transaction count, average sale, top product, and top sales person — generated for each business day, with a comparison to the previous day.

Daily Sales PDF & staff performance

From **History**, tap **Daily Report** to generate a shareable, downloadable PDF of the day's sales. Because every report and analytics view reflects who actually recorded each sale, staff performance is visible to anyone with the right permission.

Keeping the account active

Go to **More** → **Billing**.

- **Trial status** — every new business starts on a free trial; Billing shows days remaining.
- **Subscription plans** — pick a plan and duration that fits your business, with pricing shown clearly before you confirm.
- **Making a payment** — processed securely through Paystack; you're returned automatically once complete.
- **Billing history** — every past payment listed with date, amount, and status.
- **If a subscription expires** — a short grace period follows, after which access is restricted until a plan is renewed. Status and renewal are always visible right here.

Inventory & Stock (optional add-on)

A completely optional, separately-billed module for tracking stock levels — off by default, and turning it on or off never affects your base subscription above. See **section K** for the full guide.

Everything else, at a glance

Reviewed against the live app — nothing here is planned or upcoming functionality.

WHERE TO GO

WHAT IT DOES

WHAT TO DO

More → Security

Manage login restrictions (business hours, location) and see recent login activity/active sessions.

Turn restrictions on for work-only sign-in; force sign-out a lost device.

More → Approvals

Review requests needing sign-off — e.g. a sale correction or a temporary access request.

Approve or reject pending requests.

More → Imports

Bring in historical sales or a product catalog in bulk from a spreadsheet.

Download the template, fill it in, upload, review flagged rows, confirm.

More → Settings →

Turn the optional Inventory/Stock module on or off.

Switch on when ready to track stock levels; the rest of the app is unaffected if left off.

WHERE TO GO	WHAT IT DOES	WHAT TO DO
Sales History → row actions	Void, correct, or reverse a sale (permission-dependent), with a required reason.	Use this instead of trying to "undo" a sale — every change stays visible.
Notifications banner	A short banner (e.g. a business-anniversary wish) appears at the top when relevant.	No action needed — it clears itself automatically.

That's the whole app. Sign up → Complete business setup → Add products → Invite employees → Employees record daily sales from their own accounts → Monitor sales → Access reports & analytics → Manage billing and settings with confidence. Welcome aboard.

The optional Inventory & Stock module — full guide

Everything about turning it on, setting it up, and using it — for businesses that want to track stock levels alongside their sales.

Is this for you?

If your business sells countable, stockable goods — a shop, a kiosk, a pharmacy, a hardware store — and you want to know exactly how much of each product you have on hand, when it's running low, and where every unit went, this module is for you. If you sell services or made-to-order items with nothing to track, you can safely ignore it entirely — **the rest of the app works exactly the same either way.**

Turning it on

- 1 Go to **More** → **Settings** → **Modules**.
- 2 Switch on **Inventory**.
- 3 A short **2-day (48-hour) free trial** starts automatically — no payment needed to try it.
- 4 A new **Stock** tab appears in your bottom navigation right away.

The Inventory module is billed as its own subscription, **completely separate** from your base JMS Sales App plan (section I). Turning either one on or off never affects the other.

Pricing

Pick whichever duration fits your business — pricing is shown clearly before you confirm.

PLAN	DURATION	PRICE
Monthly	30 days	KES 1,000
Quarterly	90 days	KES 2,500
6 Months	180 days	KES 4,800
Annual	365 days	KES 8,000

Turning tracking on for a product

Once the module is on, open any product from **More** → **Products** and switch on **Track inventory for this product**. You can then set:

- **Unit of measure** — pieces, kg, litres, boxes, or a custom unit you define.
- **Low-stock threshold** — the balance at which this product starts showing as low stock.
- **SKU / barcode** (optional) — for your own reference.

Only products with tracking switched on appear in Stock — everything else in your catalog is unaffected.

Using Stock day to day

Bottom navigation → **Stock**, once the module is on.

The Stock dashboard

A card list of every tracked product with its current balance, and a clear low-stock badge for anything at or below its threshold. Tap any product for its full balance and movement history.

Recording stock movements

From a product's detail screen, record any of the following. A reason is required for every adjustment, damage, expiry, and loss entry — so every change to a balance stays explained, not just logged as a number.

ACTION	WHAT IT DOES	REASON REQUIRED?
Set opening stock	Record your starting balance when you first turn on tracking for a product.	No
Stock in	New stock received — a delivery, a restock.	No
Stock out	Stock leaving for a reason other than a sale — e.g. moved to another location.	No
Adjust stock up / down	Correct a balance that's known to be wrong.	Yes
Mark damaged	Stock that can no longer be sold due to damage.	Yes
Mark expired	Stock past its usable date.	Yes
Mark lost/missing	Stock unaccounted for.	Yes

Every recorded sale of a tracked product automatically reduces its balance too — you never have to double-enter a sale as a separate stock-out.

Daily reconciliation

Go to **Stock** → **Reconcile** to compare your system balance against a real physical count for each tracked product, once a day. Enter the actual count; any difference (a variance) is recorded automatically with the product, date, and size of the gap — a simple, honest way to catch shrinkage or counting mistakes early.

Stock reports

Go to **Stock** → **Reports** for a 30-day view: a stock-in-vs-out trend chart, a variance report from your reconciliations, and a low-stock list — everything you need to review at a glance, without digging through individual product histories.

Turning it off

Switch Inventory back off any time from **More** → **Settings** → **Modules**. This only hides the Stock tab and its screens — **nothing is cancelled, deleted, or lost**. Turn it back on later and every balance and history picks up exactly where you left off.
